Looking Forward to Speaking at TMS Training Days 2026 in Rotterdam!

By Dr. Holger Flick

I'm very excited to share some great news — **TMS Software has announced the next edition of TMS Training Days**, which will take place in **Rotterdam, the Netherlands, on April 23–24, 2026**!

This isn't my first time being part of a TMS event, and even though I've been a bit quiet lately when it comes to **TMS** and **Delphi**, I'm proud and truly honored to be invited again to speak at yet another **TMS Days**.

This year, I'll be talking about **TMS FlexCel**, one of my favorite topics. We'll explore practical ways to make the most out of FlexCel — from generating and reading Excel files to integrating it smoothly into modern Delphi applications. My goal is to make the session hands-on and packed with useful tips you can apply directly in your projects.

But beyond the tech, what makes TMS Days truly special is the **community**. Getting to meet fellow Delphi developers, chat, exchange ideas, and have a few laughs — that's the real magic. And yes, if you're there, I'll definitely be happy to have a chat and maybe share a beer (or two) <{

TMS always puts together fantastic events — insightful sessions, great venues, and amazing food and drinks. It's the perfect mix of learning, networking, and fun.

The final details — speakers, sessions, and pricing — are still being finalized, but you can already **save the dates: April 23–24, 2026**.

I can't wait to see everyone in **Rotterdam**! If you're attending, please come say hi — let's talk Delphi, TMS, and FlexCel, and enjoy some great times together.

INDEPENDENT · AD-FREE · READER-SUPPORTED

Free to read. Not free to make.

Every tutorial, article, and line of example code on Holger's Code is published without a paywall and without ads. This page is about what keeps it that way.

Professional work, published free

The content here is held to the same standard as professional client work: every tutorial is built as a real project, tested against current versions, documented step by step, and revisited when the frameworks move on. A single in-depth tutorial routinely takes days — and that's before the bills behind it: servers, storage, build infrastructure, licenses, and the hardware everything is verified on.

If an article or tutorial here has saved you an afternoon of debugging, taught you a technique, or helped you ship, it created real value for you. Supporting it isn't charity — it's paying for professional work you found useful, at whatever price you choose. And if you can't, keep reading anyway. That's what the free part means.
